## PROFESSIONAL PROFILE

Software Engineering graduate and current Subject Matter Expert (French Support) at TCS transitioning into AWS Cloud & DevOps Engineering. Hands-on experience building production-style microservice deployments with Terraform, Kubernetes/Helm on Amazon EKS, Docker, and GitHub Actions, combined with a strong technical problem-solving. Targeting an AWS Cloud/DevOps Engineer role with a long-term roadmap toward Solutions Architect.

## WORK EXPERIENCE

### Subject Matter Expert (French Support) – L1 2023 – Present

Tata Consultancy Services — Budapest, Hungary

- Serve as technical point of contact for escalations, handling complex tickets and incidents beyond first-line scope while ensuring SLA adherence.
- Monitor the call management system and inbound channels, running and analyzing ticket reports to identify trends and improvement areas.
- Deliver technical training sessions and maintain training materials and knowledge-base documentation for the team.
- Provide floor support and escalation handling for Service Desk Analysts, improving first-time resolution rates across the team.

### Service Desk Analyst – L1 2022 – 2023

Tata Consultancy Services — Budapest, Hungary

- Provided first-level technical support to end users on software, hardware, and mobile device issues via phone, email, chat, and web channels.
- Diagnosed and resolved technical issues, escalating unresolved cases to 2nd/3rd-level teams while meeting contractual SLA timeframes.
- Delivered multilingual support, logging all contacts in English while assisting customers in French and translating communications as needed.

## CLOUD & DEVOPS PROJECTS

### [NutriTracker — Cloud-Native Microservices Platform on AWS EKS](#)

- Provisioned core AWS infrastructure (VPC, EKS, IAM/IRSA, ECR) using modular Terraform configurations for repeatable, version-controlled Infrastructure as Code.
- Packaged and deployed 4 microservices plus MongoDB via Helm charts, routing external traffic through the AWS ALB Ingress Controller.
- Implemented secretless configuration using External Secrets Operator synced directly from AWS Secrets Manager, eliminating hardcoded credentials.
- Built an automated GitHub Actions CI/CD pipeline with deployment health checks and Grafana-based monitoring.
- *Demo videos available in the portfolio case study.*

### [full-aws-deployment-signup page — AWS-Deployed Signup Application](#)

- Designed and deployed a full-stack signup page application on AWS, provisioning infrastructure and automating the deployment pipeline end-to-end.

## EDUCATION AND TRAINING

### Software Engineering Degree 2022 – 2025

National Engineering School — Tunisia

### Master's Degree in Intelligent Systems 2019 – 2020

National Engineering School — Tunisia

### Electrical Engineering 2016 – 2019

Higher Institute of Technological Studies — Tunisia

## PERSONAL SKILLS
